Message from the President

Setsuho IKEHATA (President, Tokyo University of Foreign Studies)

The 21st Century COE (Center Of Excellence) Program, launched by the Ministry of Education, Sports, Culture, Science and Technology in 2002, grants subsidies to distinguished universities in our country for the establishment of a center for research and education which maintains the highest academic standards in the world and covers a diverse range of fields. The Program aims to raise the level of research in our country's universities and to foster the creative academic minds of future leaders in the world. Tokyo University of Foreign Studies (TUFS) submitted applications for research projects in two of the selected programs – the Humanities and Interdisciplinary/Compound/New Sphere fields. We have obtained wonderful results; both projects were selected for funding. We are extremely pleased and encouraged by this high evaluation of the unique research projects and the educational potential of our Graduate School of Area and Culture Studies.

A strong foundation in foreign languages is vital to Area and Culture Studies. TUFS engages in edu-

cation and research spanning more than 50 languages, cultures and societies in every part of the world. This contributes to cross-cultural understanding and the fostering of people who are capable of helping actualize the goal of creating a harmonious global community. In addition, a double-major system that requires students to specialize in both a language and a discipline-related course of study enables TUFS to produce graduates equipped with a

high degree of language competence and a deep understanding of world cultures and societies.

Our new campus in Fuchu is proudly equipped with a state-of-the-art computing network. The most outstanding feature is the information literacy and the number of computers on campus, which ranks at the top level among liberal arts universities in our country. With such a privileged information infrastructure, TUFS endeavors to make the best use of multimedia, the Internet and other high-tech capabilities to develop the most advanced language education system.

The University's Usage-Based Linguistic Informatics project, selected by the 21st Century COE Program, is the concrete manifestation of our plans for the future, which I have just outlined. The implementation team members are committed to this future vision and are vigorously engaged in the project. It is my avid hope that they will produce rewarding results. It is the intention of everyone at TUFS to combine our wisdom in a concerted effort to do our utmost to make the 21st Century COE Program a success.

With a view to providing full support to the program, TUFS has established the "21st Century COE Program Administration Office" which reports directly to me, as the president of the university. This office is an inter-sectional organization consisting of the president, the vice president, the deans of each division, the program leader, as well as the managers of the secretariat. It has the important role of enhancing cooperation between the various sections within TUFS and to administrate the use of space and the budget allocated for research.

Tokyo, August 1, 2005

Center of Usage-Based Linguistic Informatics (2002-2006)

Person in charge of program promotion

Name	Area of specialization	Role
Yuji KAWAGUCHI	French & Turkish Linguistics	Center leader; responsible for Linguistic Informatics
Susumu ZAIMA	German Linguistics	Responsible for Applied Linguistics & Linguistic Informatics
Nobuo TOMIMORI	Theoretical Linguistics	Linguistics
Toshihiro TAKAGAKI	Spanish Linguistics	Responsible for Linguistics
Yoichiro TSURUGA	French Linguistics	Linguistics
Ikuo KAMEYAMA	Russian Literature	Applied Linguistics
Akira MIZUBAYASHI	French Literature & History	Applied Linguistics
Hideki NOMA	Korean Linguistics	Linguistics
Kohji SHIBANO	Information Science	Responsible for Computer Sciences & Linguistic Informatics
Makoto MINEGISHI	Linguistics	Computer Sciences & Linguistic Informatics
Mayumi USAMI	Social Psychology of Language	Applied Linguistics

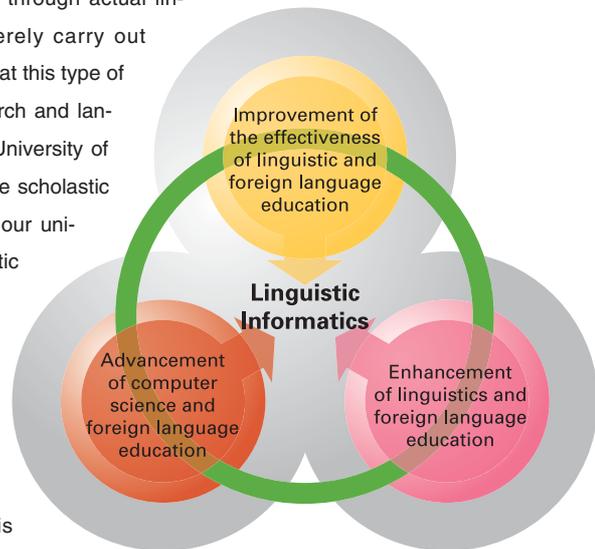

The screenshot shows the homepage of the Center of Usage-Based Linguistic Informatics. The header includes the logo and the title '21世紀COEプログラム 言語運用を基盤とする言語情報学拠点'. A navigation bar contains links for 'ホーム', 'サイトマップ', '検索', '学内連携', and 'English'. The main content area is titled '言語運用を基盤とする言語情報学拠点とは' and describes the center's mission to develop and disseminate high-quality foreign language materials through the internet. It mentions the creation of a new interdisciplinary field by combining linguistics, applied linguistics, and linguistic informatics. A sidebar on the left lists various resources like '研究の概要', '国際会議・研究会', and 'TUFSS言語モジュール'. The bottom section, '最新ニュース', lists recent events such as the public release of a '通言語文法モジュール' and the publication of a book on '多言語話し言葉コーパス'.

What is Linguistic Informatics?

“Linguistic Informatics” is an academic field that considers what happens when linguistics and language education are combined based on computer science. This pamphlet will provide an easy-to-understand explanation of our COE Program.

In the linguistics research conducted by Tokyo University of Foreign Studies thus far, we have reconsidered language theory and its importance through actual linguistic education practice rather than merely carry out research on language theory. It can be said that this type of interactive feedback between linguistic research and language education is representative of Tokyo University of Foreign Studies’ uniqueness and its distinctive scholastic character. The COE Program capitalizes on our university’s unique experience to gather linguistic usage data for a vast array of languages from around the world and then analyze that data using computer science. The results of these analyses are then put to practical use in actual linguistic education settings, thus enabling an organic integration of linguistic theory and education. This integration of linguistics and language education is highly expected to lead to the advancement and increased effectiveness of conventional foreign language education.

As shown in the organizational chart below, the COE program is made up of four research groups.

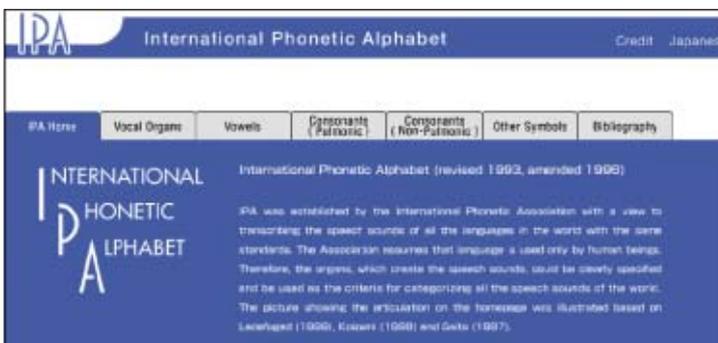

The “Linguistic Informatics” Group plays a central role in the COE program since it is the sole research group in charge of the development and application of TUFS Language Modules. There are three groups under the “Linguistic Informatics” Group: “Linguistics,” “Applied Linguistics” and “Computer Sciences.” These three groups conduct basic research related to the development, improvement and application of the TUFS Language Modules.

The Supervisory Group charged with the responsibility of overseeing this research organization is made up of seven of the people in charge of program promotion for the 21st Century COE Program. Important decisions related to the implementation of annual plans are made at Supervisory Group meetings. In addition, a Liaison Group has been established to forge closer ties among these groups. Liaison Group meetings are also held on a frequent basis, and information regarding the progress of the project is reported among the groups.

TUFS Language Modules

Internal disclosure of the TUFS Language Modules commenced on April 25, 2003, and the first module to be revealed to the public was the IPA (International Phonetic Alphabet) Module on June 9. IPA is comprised of phonetic symbols used to transcribe the speech sounds of all the languages in the world with the same standards. By clicking on the phonetic symbols for vowels and consonants that appear in the IPA Module and then clicking on the talking parrot at the lower-right portion of the screen, you can listen to each of the respective sounds.

<http://www.coelang.tufs.ac.jp/ipa/english/index.htm>

THE INTERNATIONAL PHONETIC ALPHABET												IPA Home	Vocal Organs	Bibliography	Credit	
VOWELS	CONSONANTS (PULMONIC)				CONSONANTS (NON-PULMONIC)				OTHER SYMBOLS				IPA Home	Vocal Organs	Bibliography	Credit
	Bilabial	Labiodental	Dental	Alveolar	Postalveolar	Retroflex	Palatal	Velar	Uvular	Pharyngeal	Glottal					
Plosive	p b			t d		ʈ ɖ	c ɟ	k ɡ	q ɢ		ʔ					
Nasal	m	ɱ		n		ɳ	ɲ	ŋ								
Trill	ʙ			r												
Tap or Flap				ɾ												
Fricative	ɸ β	f v	θ ð	s z	ʃ ʒ	ʂ ʐ	ç ʝ	x ɣ	χ ʁ	ħ ʕ	h ɦ					
Lateral fricative				ɬ ɮ												
Approximant		ʋ		ɹ			ɻ	j	ɰ							
Lateral approximant				l			ɭ	ʎ	ʟ							

Where symbols appear in pairs, the one to the right represents a voiced consonant. Articulations judged impossible

Explanation

ʝ

Voiced palatal plosive

- (1) Vibration of the vocal cords → voiced
- (2) The front dorsum of the tongue and the hard palate → palatal
- (3) —
- (4) Complete closure and its release → plosive
- (5) The velum is raised and does not allow the airstream to pass through the nasal cavity → oral

In September 2003, following the unveiling of the IPA Module, the Pronunciation Module, which covers 11 languages (German, French, Spanish, Portuguese, Russian, Chinese, Korean, Mongolian, Filipino, Vietnamese and Japanese), was released. Then, on December 12, 2003, all 17 languages of the Dialogue Module were published on the Internet in line with the holding of the "First International Conference on Linguistic Informatics."

The TUFS Language Modules are geared towards students who understand Japanese and are studying the target language for the first time. The English module, however, is targeted at elementary and junior high school students.

TUFS Language Modules <http://www.coelang.tufs.ac.jp/modules/index.html>

The 17 languages of the TUFS Language Modules:

English, German, French, Spanish, Portuguese, Russian, Chinese, Korean, Mongolian, Indonesian, Filipino, Lao, Cambodian, Vietnamese, Arabic, Turkish, Japanese

Modules and Cross-Linguistic Expressions

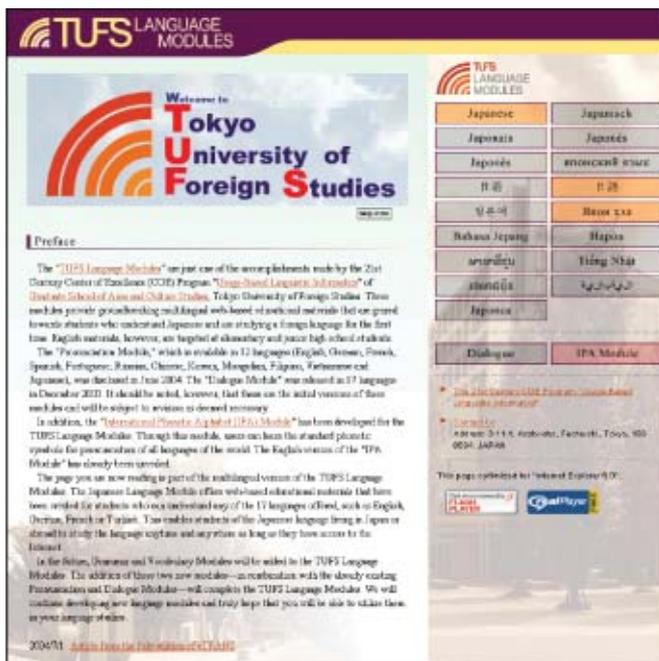

The TUFS Language Modules are innovative web-based educational materials that have never before been available. As the name suggests, these modules were created based on a “modular concept.” Children’s magazines often include supplemental projects. When you were a child, did you follow the instructions that came with projects like these to the exact letter? As long as the end result is the same, shouldn’t everyone be able to do things their own way?

Language learning materials comprised of individual components that can be used on their own to a certain extent but can also be utilized together are referred to as “module educational materials.” With the TUFS Language Modules, language learning can be broken down into four modules: Pronunciation, Dialogue, Grammar and Vocabulary. While learners can of course study these four modules comprehensively, they can also freely choose which of the four modules to begin their language studies with. This freedom of choice can certainly be said to be one of the advantages of the TUFS Language Modules. And unlike conventional printed educational materials, these modular educational materials can be revised or modified easily, which is another merit of this system. Moreover, by putting web links to practical use, these four modules could become more closely linked in the future.

Although the TUFS Language Modules give learners more freedom to design their own study plans, it will be necessary to develop a uniform system for measuring performance and achievement. We plan to commence research for the development of a descriptive model for language proficiency that is unique to Tokyo University of Foreign Studies and utilizes the TUFS Language Modules.

Multilingual Interactive Modules

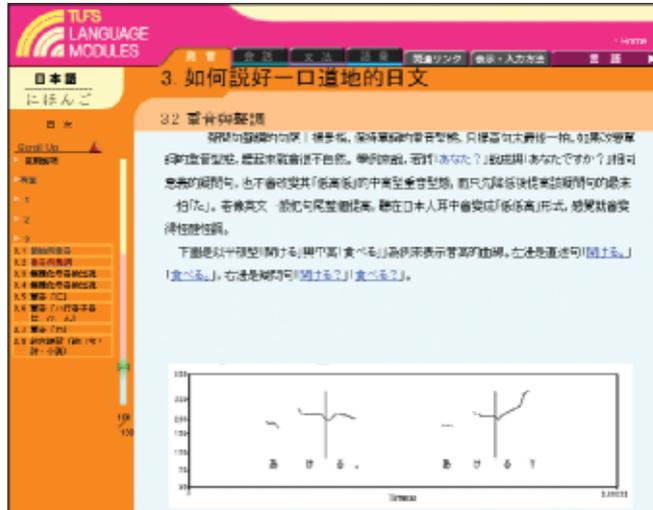

Wouldn't it be wonderful to be able to use the same educational materials to study several different languages? The multilingual version of the TUFFS Language Modules makes it possible to do just that. At present, those who understand English, French, Turkish, Mongolian, Chinese and Korean can study Japanese using the Pronunciation Module and the Dialogue Module.

<http://www.coelang.tufs.ac.jp/english/modules/index.html>

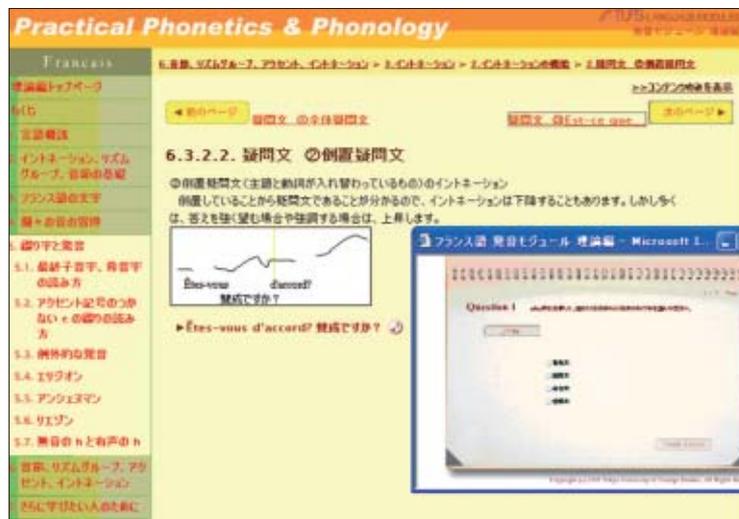

Example page for studying Japanese dialogue in Mongolian

Example page of studying Japanese pronunciation in Chinese (traditional Chinese characters)

This multilingual version not only corresponds with the current trends toward multiculturalism and multilingualism, but can also be said to be a challenge against conventional foreign language education in Japan. By improving the multilingual version, the traditional image of Universities of Foreign Studies being universities where Japanese students study foreign languages will be shed and these universities will have the potential to undergo a transformation into universities where non-Japanese and exchange students can study Japanese or other languages. We will continue to press forward with the multilingualization of the TUFS Language Modules.

In July 2005, the Cross-Linguistic Grammar Module, which introduced the idea of cross-linguistics, were released to the public. The Cross-Linguistic Grammar Module is the page in which we can refer the overview of the general grammatical characteristics that are common among various languages by taking the grammatical items of 17 different languages from the Grammar Module as the examples. It can be a short cut to learning the languages by thoroughly considering what the grammar and the human languages are all about.

Example page of Practical Phonetics & Phonology of French

Starting from 2004, the Pronunciation and Dialog Modules of the multiple languages have been actually used for lessons at Tokyo University of Foreign Studies and other universities, for which the internal and external evaluations were conducted, and the outcomes were included in the fifth volume of "Working Papers in Linguistic Informatics": Second Language Pedagogy, Acquisition and Evaluation. In 2005, the Grammar Modules for German, French, Russian, Chinese, Filipino, Vietnamese, Turkish and Japanese were released to the public. Starting from 2006, it is planned to release the Vocabulary Module to the public.

Linguistic Culture Portal Site and Multilingual Corpora

At Tokyo University of Foreign Studies, 26 languages are taught as the major subject languages. In 2005, a portal site was configured related to the linguistic cultures, and this was made available to the public. (http://www.coelang.tufs.ac.jp/english/multilingual_corpus.html) At the Linguistic Culture Portal Site, information on the overviews, related libraries and links to embassies, newspapers and TV stations for the 26 languages are posted.

In 2005, we released basic vocabularies for Wakhi in the Pamir language family, as well as the texts for Northern Bunun in the Western Austronesian language family. Also through the field research, we recorded daily conversations in Malay, Russian and Spanish in 2004 and in French, Turkish and Italian in 2005. They are planning to configure the Multilingual Corpora for those languages and release them to the public on the web site.

The screenshot shows a web page for the Wakhi language. On the left is a green sidebar with a navigation menu. The main content area has a title 'ワヒー語(Wakhi)' and a grid of four images. Below the images is a section titled '記事内容の引用について' followed by several paragraphs of Japanese text. The text discusses the Wakhi language family, its speakers in the Pamir region, and the project's aim to create a multilingual corpus. It mentions that the Wakhi language has approximately 200,000 speakers and is spoken in the Pamir Knot region. The project is part of the COE program at Tokyo University of Foreign Studies. The footer includes a copyright notice for Tokyo University of Foreign Studies, 2005.

Research Projects

Linguistics

- Phonetics research
 - Construction of the IPA Module
 - Cross-linguistic perspectives in phonetics
- Corpus linguistics
 - Sentence structure analysis based on multilingual corpus
 - Analysis of grammatical function based on field research
- Practical use of the TUFs Language Modules
 - Application of the results of multilingual corpus analysis to the TUFs Language Modules

Applied Linguistics

- Discourse data analysis
 - Compilation of natural dialogue data based on field research
 - Natural dialogue data analysis for linguistic usage research
- Second language acquisition (SLA)
 - Construction of a Japanese composition (advanced-level students) database
 - Research on second language acquisition strategies and beliefs
 - Basic research for an English learner language corpus
 - Creation of the English Dialogue Module teacher's manual
- Evaluation research
 - Implementation and analysis of a questionnaire for module users
 - Development of a TUFs language proficiency scale

Example page of studying Japanese dialogue in English

Computer Sciences

- E-learning
 - Creation of databases and Web pages for the TUFs Language Modules
- Multilingual information processing
 - Natural language processing and analysis of English, Japanese and other languages

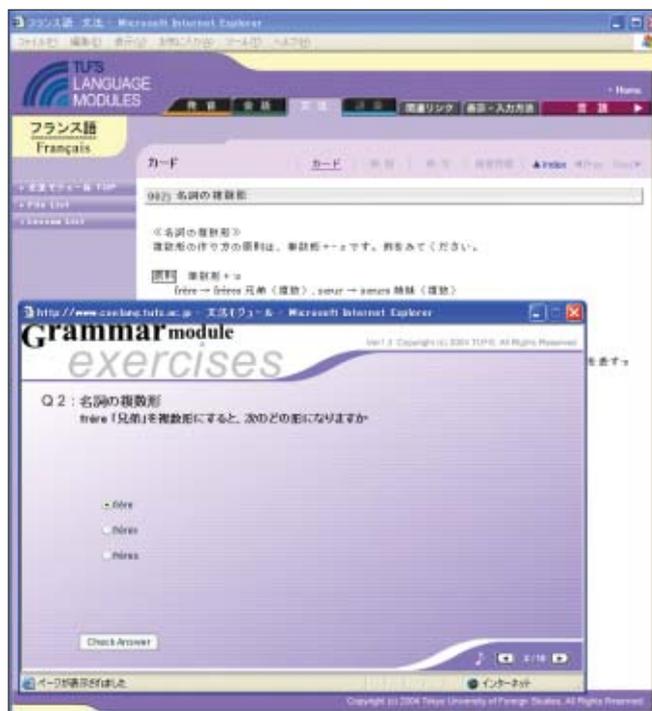

Research Projects in Academic Year 2004-2005

Linguistic Informatics:

The development of the grammar module is underway, and information should be available by the beginning of 2005. The development of the vocabulary module will commence next year.

Editors of Grammar Modules

English	Kazuyuki URATA, Keizo NOMURA
German	Takashi NARITA
French	Yuji KAWAGUCHI
Spanish	Shigenobu KAWAKAMI, Toshihiro TAKAGAKI

First International Conference on Linguistic Informatics

Date: December 13 (Sat.) – 14 (Sun.), 2003

Venue: Tokyo University of Foreign Studies, Research-Lecture Building, Multimedia Hall

The First International Conference on Linguistic Informatics was held at Tokyo University of Foreign Studies in December 2003.

Participants at the conference not only learned about the new integrated field of study known as Linguistic Informatics and its current status, but also considered its future potential. The conference was comprised of three sessions, and everything from reports to question and answer sessions was conducted in English.

1. Computers and LinguisticsPotential for collaboration between computers and linguistics
2. Corpus LinguisticsStatus report on corpus-based linguistic research
3. Applied LinguisticsRelationship between second language acquisition and linguistic theory
Current status of natural dialogue-based discourse analysis

Researchers from both at home and abroad conducted lectures and presented reports, and there were also a number of presentations given by graduate students. Proceedings were published prior to the holding of the conference. There were over 300 people in attendance at this two-day conference, and the event was brought to a successful close at the reception following the end of the conference.

The report collection for this conference was published domestically in Vol. 3 of the Linguistic Informatics Series and was published with new content and in a different format by John Benjamins Publishing Company in the Netherlands.

Domestic Conference for Linguistic Informatics

What is Linguistic Informatics?

Recently, the corpus analyses and statistical analyses using computers have been actively conducted in linguistics, and unprecedented new knowledge has been found. On the other hand, the natural dialogs are analyzed from the pragmatic viewpoint, and they are being introduced into the course material on the Web. There are also some continued efforts to analyze the language corpora of the learners and apply the outcomes to foreign language studies. The distance between Linguistics, Applied Linguistic and Computer Science is becoming closer and closer as described above. The Linguistic Informatics based on the linguistic usages is defined as the integrated study fields of the Linguistics and Applied Linguistics based on Computer Science.

Poster

— Fostering New, Young Researchers —

Date: October 4 (Tue.) 13:10 - 18:00

Venue: 419 Institute of Language Research, Tokyo University of Foreign Studies

— Contribution of Linguistics, Applied Linguistics and Computer Science to the Linguistic Informatics —

Date: October 5 (Wed.) 12:50 - 18:00

Venue: 101 The Multimedia Hall (12:50-14:40) 115 Lecture Room (15:00-18:00)

Second International Conference on Linguistic Informatics

Workshop

The Spoken Language Corpora – Their Importance and Applications –

Dec. 9 (Fri) 13:10 - 18:00

C-ORAL-ROM is a collaborative project on "Spoken Language Corpora for Romance Languages" by the University of Florence in Italy, the Autonomous University of Madrid in Spain, the University of Aix in France and the University of Lisbon in Portugal.

This workshop was co-hosted by C-ORAL-ROM and Usage-Based Linguistic Informatics (UBLI) of Tokyo University of Foreign Studies.

Poster

The Second International Conference on Linguistic Informatics

– Contribution of Linguistics, Applied Linguistics and Computer Science –

Dec. 10 (Sat)

The Multi-Media Hall (101) 13:10 - 18:00

At the second international conference, we are planning to make it clear on the theoretical bases of the Linguistic Informatics and to properly position this new field from an academic viewpoint.

Lectures

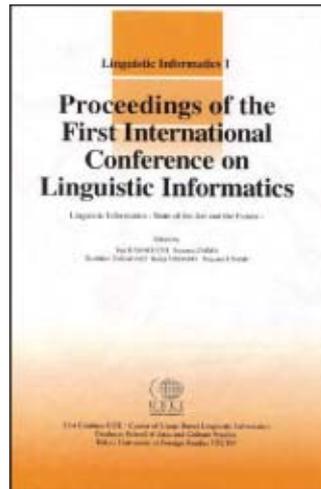

1. Linguistic Analysis of Spoken Language
2. Pragmatic Analysis of the Corpora of Spoken Language
3. Corpus Linguistics and Applied Linguistics

Free Discussions

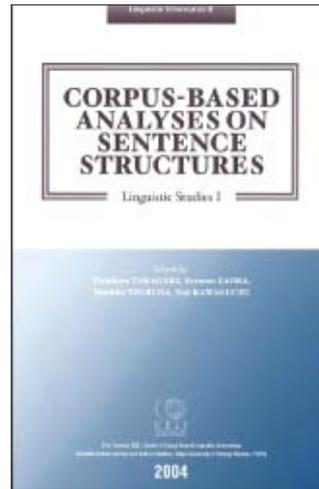

John Benjamins is planning to publish the reports from the second international conference, together with the research reports from the domestic conference.
